## Online Jewelry Store

### Business Needs

A US-based B2C firm in Jewelry industry wanted to develop the website in such a way to market its jewelry products online and increase the sale of all its items.

### Rigel Delivery

Rigel Networks provided complete ecommerce solutions using customized CMS, OsCommerce and MS.Net frameworks that gave control over the look, content and functionality of the client’s website. The website provides the details of each product classified into various sub-sections.

The end-customers can see online details and video reviews of the products and can comment on the same after successfully logging into their accounts. They can select any product and gift it through online credit card payment gateway. Rigel also implemented affiliate marketing programs with Google, Bing, Amazon and Link Share.

### A Few Key Features

- Secure Shopping Cart
- Credit Card Transaction
- Online Inventory Updates
- Email Templates
- Share product information through “Email to friend” link in their peer group
- Share users experience & reviews on product
- Gift card coupons and Discount coupons
- Live chat support
- Track number of hits on product
- Order Tracking
- Status update for items, users, admin, vendor, agent, item category etc.
- Newsletter subscription & management
- PayPal discount
- Full website control
- Site layout management
- Hassle free content management by administrator

- Increased Productivity.
- Increased Revenue & Growth for the company.
- Easy Search User Interface.
- Gathering data in one platform.
- Users are given a flexibility to track out respective business location on Google map on website.
- Inventory Management.
Business Need

The client is a multi-national pharmaceutical company with a global presence in about 23 countries.

They wanted a complete redesign of their corporate website. Previously they were using an old MS CMS platform which was no longer supported by Microsoft. The client wanted to embrace responsive web design & needed to elevate their content offerings to website visitors by usage of modern technologies.

The important factor was that the user journeys were required to be established in order to satisfy each of these user groups in each of the 23 countries to which the site was rolled out.

Rigel Delivery

Rigel Networks engineered a fully responsive web platform that delivered powerful localization functionality as well as integrations with a number of third-party platforms.

Every site is localized using a site vocabulary module that translates all content, including calls to action. This means that all 23 websites worldwide launched have content in the relevant native language.

Content can also be shared across all sites as a result of the widgets and page types that Rigel Networks created. Our developers designed pre-styled widgets & page types, & explained them to create web page by their own.

Alongside members of the creative team, Rigel Networks worked with the client from the very start of the project to establish who their key customer segments and what these user groups are hoping to achieve from visiting the site. This information is channeled into user personas held within the system.

Rigel Networks utilized Kentico’s Enterprise Marketing Solution (EMS) in order to create online marketing functionality. This solution provided the client with the power to deliver personalized content for each individual visitor. This content is based on previous site behavior. For example, if a user has been searching product pages for drugs to combat arthritis, the next time they visit the site these product pages will be in prominent positions.
We also provided them with the power to perform A/B testing. This means that they can run the same page at the same time but with a slight difference e.g. a different lead story on the homepage. They can then track the results and see which page is performing better.

**The Outcome**

- The number of visitors using mobile devices increased from five percent of site traffic to 28%.
- A significant amount of time and costs were saved by being able to share content across sites and spin up web pages internally when needed.
- The number of visitors using tablet devices increased from 12% percent of site traffic to 32%.
- The average time-on-page has doubled from 53 seconds to 1 minute 28.

**Customer Profile**
The client is a multi-billion dollar pharmaceutical company with a global presence.

**Technologies**
Kentico
Established in 1994, the client is an independent Mobile Phone Retailer based in and around the city of London. The client had a huge retail base spanning across entire UK, but what lacked was the online presence, for which they came to Rigel Networks.

**Rigel Delivery**

Leveraging the powerful functionality of .net technology & flexibility of Kentico CMS, Rigel Networks designed and developed them an e-commerce store that allowed their customers to access their products, various offers, deals & service offerings.

**A few Features**

- Manage products: Client can add/remove/update mobile phones, features, business deals etc. from Kentico admin panel.

- SIM management: One can manage SIM card deals, set deal type, upgrades etc. under this feature

- Data plans & Tariff Management: The client can modify & update the data plans, tariffs, gift coupons etc.

- Pay monthly module: Customized payment for customers. Client can set it from Kentico.

- Sales & Promotions management: Client can directly launch the advertisements, offers & promotions from the admin side.

- Competition Module: Customers call fill in the details & compete for the latest product launch by the client. Client selects one winner each month, who gets the first new launched product. This is entirely handled by the client from the admin panel (Kentico).

Customer Profile
Established in 1994, the client is an independent Mobile Phone Retailer based in and around the city of London

Technology
CMS: Kentico

Key Criteria for Selecting Kentico
- Is easy for our clients to learn and operate, and supports content teams well
- Supports the adaptation and display of content for multiple devices
- Provides a secure, stable, and open architecture
- Is highly extensible with the ability to connect to other systems
- Is cost-effective and eliminates the need for multiple online marketing systems
- Has customizable reporting capabilities to demonstrate campaign success

The Outcome
Their time-to-time market & target audience coverage increased by 75%. Now the client enjoys better success in image & brand building with a definite increase in productivity, which in turn gave a boost to their revenue.
**NopCommerce Website Development**

**Customer Profile**
- The client is one of the leading web store owner selling a range of print products to various global clients

**Technologies**
- Nopcommerce

---

**Business Needs**

The client is a web store owner selling range of print products, such as print, flyers and brochures. It gives customers the best experience to experience selecting, viewing and purchasing prints.

The client wanted the latest version of nopCommerce. He wanted a price matrix along with price adjustment according to quantity for a product.

He also wanted to update files of various formats and wanted a checkout attribute to set the type of allowed formats.

**Rigel Delivery**

We developed a NopCommerce website along with a new product template with extended product variant attribute value for different quantities. We provided an extended checkout attribute to set the type of allowed formats for file.

The price table was designed with suggestions for different quantity. We integrated a price calculator along with a discount filter based on the quantity.

**Benefits**

- Agile approach for rapid completion of the website
- Independent modules were created and converted them into user controls, which makes it easy to work out a specific page through quoting
- Fully 100% customizable design using templates
- Contains both a catalog frontend and an administration tool backend for easy management
- Secure, scalable and extendable e-commerce platform
Magento Website Development

Medium (50-100 employees)

Country
United Kingdom

Customer Profile
The client is one of the leading online fashion retailers based in Newcastle having ecommerce presence across the globe.

Technologies
Magento

Business Needs
The client is a niche fashion store based in Newcastle having ecommerce presence across the globe. Stocking top brands such as Lyle & Scott, Fred Perry, Adidas Originals, Levi Vintage etc., the company has gone from strength to strength and is now widely recognized as one of the leading online fashion retailers in UK.

The client had outgrown their previous site. As their list of brands continued to grow, the front-end design, commended for its usability, was starting to become slightly less refined. Also, administration was becoming a real problem.

Managing products with a heavily modified version of the current ecommerce platform was time-consuming. The main requirement of this project was to build a brand new website built on the Magento framework that would provide a solid platform for growth in future and can easily accommodate the website changes.

Rigel Delivery
There were a number of bespoke features developed for this project to serve a range of purposes. We used our “Latest Products” module to display a collection of latest products automatically on the home page, with a link to a page displaying more latest products. This is a small module that has proved useful on a number of projects.

We also integrated a WordPress blog into this site, which powers the Latest News section. This also required development of a module to show a collection of latest news headlines on the home page, along with a thumbnail image, and also headlines in the left column on various CMS pages.

We integrated street level post-code lookup during the checkout process. This allows UK customers to enter their postcode and quickly select their full address when placing their order.

There was a rotating flash banner on the home page. The client can login and upload images to be added to the banner quickly and easily, without any technical knowledge.
